Minimum Water Temperature:	40 Degrees F (5 Degrees C).
Maximum Water Temperature:	120 Degrees F (49 Degrees C).

Useful Life:

- Suggested replacement is every 18 to 24 months.

RECYCLING INFORMATION

We, Quality Industrial Water®, encourage you to return your spent cartridge to us for recycling. This unit was designed so that the plastic could be reground and KDF be re smelted by a recycling company. We'd prefer our products get a second life rather than contributing to the amount of waste that ends up on in the landfill. The postage it takes to send back the spent cartridge is a small, but worthwhile contribution to the overall health of our environment. Please mail or ship the cartridge to: **Good Earth Recyclers**, 421 South California Street, Unit D. San Gabriel, CA 91776.
